EXAMINER'S REASON FOR ALLOWANCE

1. **Claims 1- 32** are allowed over prior art.

The following is an examiner's statement of reasons for allowance:

Eribes teaches a phase locked loop (PLL) comprised of a phase detector outputting an up and down signal or lead and lag signals, a phase error from the lead and lag signals, a control signal from the lead and lag signals and an adjusted phase error signal and applying the control signal to an output of a voltage controlled oscillator. Eribes does not teach a variable first gain signal, a variable second gain signal and a control signal outputted in response to a first and second reference signal and a first and second gain signal.

Norimatsu teaches a PLL comprised of a phase/frequency comparator outputting a lead and lag signal, a charge pump regulating flow-in and flow-out of the current, and a control signal to the VCO. Norimatsu does not disclose a phase error signal in response of the lead and lag signal, a variable first gain signal, a variable second gain signal and a control signal in response to the first reference signal, a second reference signal, a first gain signal and a second gain signal.

The novelty of the invention disclosed by the applicant are generating a variable first gain signal in response to the phase error signal and first signal, generating a variable second gain signal in response to the lead error signal and lag error signal and generating a control signal in response to a first reference signal, a second reference signal, the first gain signal and the second gain signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
